

# JENNY

*Jersey cow*

Jenny is a Jersey cow. She was donated to the RSPCA in 2002 by a dairy farmer from West Gippsland.

Jersey cattle are a breed of dairy cows. When in full milk production, each animal can produce around 25 to 30 litres of milk per day (which amounts to 3,500-5,000 litres in a season of approximately 300 days).

Dairy cows produce milk when they give birth. As Jenny was not able to become pregnant again, she was removed from the herd. When the farmer heard that the RSPCA was looking for a good-natured cow to join the Education Team, he kindly donated Jenny.
